

Course Unit	Biomechanics of Exercise		Field of study	Sport Sciences	
Master in	Physical Exercise and Health		School	School of Education	
Academic Year	2023/2024	Year of study	1	Level	2-1
Type	Semestral	Semester	2	Code	6125-520-1201-00-23
Workload (hours)	162	Contact hours	T 10	TP 10	PL 10
			TC -	S 5	E -
			OT 10	O -	

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) **Tiago Manuel Cabral dos Santos Barbosa**

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. Being able to analyse and diagnose motor behaviour as well as physical exercises base on biomechanics evidence
2. Being able to prescribe motor behaviour and physical exercises base on biomechanics evidence
3. Understand the standard research steps in biomechanics of exercise
4. Be able to design and conduct biomechanics testing in lab and field settings independently

Prerequisites

Before the course unit the learner is expected to be able to:

1. Functional anatomy or related fields
2. Information and communication technology (ICT)
3. Histology and/or Biomaterials or related fields
4. Exercise Physiology or related fields

Course contents

A – Testing in biomechanics (experimental biomechanics and analytical biomechanics) B – Posture and locomotion C– Qualitative and quantitative assessment of human movement D – Modelling human movement

Course contents (extended version)

1. A - techniques of assessment in biomechanics: definitions, kinematics, kinetics, EMG, modellation
2. B - Posture and locomotion: gait cycle, body sway
3. C – Qualitative and quantitative evaluation of human movement: models, steps, determinants
4. D - Modelling human movement: techniques, procedures limitations, applications

Teaching and learning methods

Theoretical sessions - Lectures will provide background information about key concepts and theories Theoretical-practical sessions - applications in different settings of the content covered in lectures. Laboratory sessions - hands-on experiential learning Tutorial sessions - students' consultation and supervision

Assessment methods

1. Continuous evaluation - (Regular, Student Worker) (Final)
 - Intermediate Written Test - 50% (Classroom written test)
 - Practical Work - 50% (Team assignment)
2. Exam Evaluation - (Regular, Student Worker) (Final, Supplementary, Special)
 - Final Written Exam - 100% (Sit down exam paper)

Language of instruction

1. Portuguese
2. Portuguese, with additional English support for foreign students.
