Course Unit	Option I - null			Field of study	-		
Master in	Environmental Technology			School	School of Agriculture		
Academic Year	2023/2024	Year of study	1	Level	2-1	ECTS credits	3.0
Type	Semestral	Semester	2	Code	1076-809-1205-01-23		

Workload (hours)	81	Contact hours	T -	TP -	PL -	TC -	S -	E -	OT -	O -

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s): Zulimar Hernández Hernández

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:
1. Handle, at a basic level, with geological maps and map based geological data
2. Use theoretical tools provided to interpret natural phenomena focused in the selected topics (groundwater, slope stability, erosion and river sediment load
3. Identify and assess environmental risks associated to those phenomena

Prerequisites

Before the course unit the learner is expected to be able to:
Basics on Geology, Soil Science and/or Hydrology, at graduation level in Sciences or in Engineering

Course contents

I. Geology of Portugal: short overview; II. Selected topics: 1. Groundwater (concepts on Hydrogeology; use quality and environmental impacts; Portuguese Continental aquifer systems); 2. Mining Resources (basic concepts on mining, environmental problems and risks, restoration and stabilization of waste dump); 3. Erosion and river sediment load (soil erosion by water: processes, factors; river erosion and sediment transport; river morphology; river and catchment management)

Course contents (extended version)

1. Introduction: programme context and justification, objectives and structure
2. Part I – Geology of Portugal: brief overview Overview on the Geology, Lithology and Relief
   - Structural units of Iberian Peninsula
   - Structure and Relief of Continental Portugal
   - Geological evolution of Continental Portugal
   - Geology, Lithology and Relief of Portuguese Continental territory: a synthesis
3. Part II – Selected topics of Environmental Geology: presentation and justification
4. 2. Groundwater
   - Concepts: groundwater; aquifer (classification, descriptive parameters); water balance
   - Short description of Portuguese Continental aquifer systems
   - Water in soils and rocks: flow in porous media and Darcy law, flow descriptive parameters
   - Steady and transient flow: applications to ditches and wells
   - Groundwater use and quality, and environmental impacts
5. Mining Resources
   - Basic concepts on mining
   - Environmental problems and risks
   - Restoration and stabilization of waste dump
6. Erosion and river sediment load
   - Soil erosion by water: processes and factors
   - Erosion, transport and sedimentation in river networks
   - River morphology dynamics. Applications (reservoir silting, river sands extraction)
   - River and catchment management: principles and approaches

Teaching and learning methods

Theory lectures supported by syllabus and references provided to students at semester start. Practicals comprising supervised activities, include lab work and exercises, with guidelines provided during semester. Tutorial support for students during semester, includind exams period.

Assessment methods

1. Alternative 1 - (Regular, Student Worker) (Final, Supplementary, Special)
   - Practical Work - 60% (Tasks developed in each block of the programme, weighted according to block extent.)
   - Intermediate Written Test - 40% (Complementary assessment, compulsory for students not achieving positive results in Practicals.)
2. Alternative 2 - (Regular, Student Worker) (Final, Supplementary, Special)
   - Final Written Exam - 100% (For students not selecting/fulfiling requirements of/achieving positive mark in Alternative 1.)

Language of instruction

Portuguese, with additional English support for foreign students.
