

Course Unit	Nature Conservation		Field of study	Environmental Sciences	
Master in	Management of Forest Resources		School	School of Agriculture	
Academic Year	2022/2023	Year of study	1	Level	2-1
Type	Semestral	Semester	2	ECTS credits	6.0
Code	6363-352-1202-00-22				
Workload (hours)	162	Contact hours	T 30	TP -	PL 30
			TC -	S -	E -
			OT 20	O -	

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) João Carlos Martins de Azevedo

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. It is expected that the students acquire conceptual, ethical, scientific and technical foundations in biodiversity and natural resources conservation.

Prerequisites

Before the course unit the learner is expected to be able to:
Basic knowledge in biology, ecology, and forestry

Course contents

Biodiversity and ethics Processes of biodiversity creation and destruction Conservation paradigms Principles, strategies and practices of biodiversity conservation
Nature conservation in Portugal Legal instruments in conservation Conservation of forest systems Integration of conservation in forest planning and management
Forest management and conservation

Course contents (extended version)

1. 1 Introduction
 - environment, ecology, biodiversity, value of the environment and of resources;
 - natural resources and biodiversity conservation;
 - sustainability and other fundamental concepts
2. 2 Nature conservation:
 - definitions, history, participants and roles
3. 3 Biodiversity
 - definitions, levels, approaches, importance, values and functions
4. 4 Threats to biodiversity
 - mass extinction and global change;
 - habitat loss and degradation, overexploitation, exotic invasive species
5. 5 Biodiversity conservation:
 - in situ and ex situ conservation; conservation centered in populations, ecosystems and landscapes;
 - social and economic aspects of conservation
6. 6 Conservation based upon protected areas:
 - protected areas in the world in time;
 - creation of protected areas; management;
 - design: dimension, shape, spatial arrangement
 - ; evaluation: GAP analysis;
 - IUCN Protected Areas categories;
 - Protected areas in Portugal: History, categories, objectives, selection and management criteria;
 - quantitative methods for conservation area selection; management of protected areas;
 - limitations of conservation centered in protected areas
7. 7 Main national and international legal tools in conservation:
 - Berna, Washington, Ramsar, Biological Diversity Conventions;
 - Birds and Habitats Directives; Natura 2000 Network;
8. Conservation of forests
 - Approach, principles and objectives of forest conservation
 - Landscape scale conservation: connectivity; spatial pattern
 - Stand scale conservation: structural complexity - retention
 - Conservation and management of forest systems

Teaching and learning methods

Conventional lectures with oral presentation of subjects. Labs based upon development of practical exercises in several fields and presentation and discussion of selected papers and case studies. At the end of the semester there is a field trip to a protected area.

Assessment methods

1. Alternative 1 - (Regular) (Final, Supplementary, Special)
 - Final Written Exam - 70%
 - Practical Work - 30%
2. Alternative 2 - (Student Worker) (Final, Supplementary, Special)
 - Final Written Exam - 100%
 - Development Topics - 0%

Language of instruction

1. English
2. Portuguese
