

Course Unit	Irse Unit Advanced Silviculture			Field of study	Forestry & Hunting	
Master in	Management of Forest Resources			School	School of Agriculture	
Academic Year	2023/2024	Year of study	1	Level	2-1	ECTS credits 6.0
Туре	Semestral	Semester	2	Code	6363-808-1204-00-23	
Workload (hours)	162	Contact hours			C - S - solving, project or laboratory; TC	E - OT - O - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s)

Maria Sameiro Ferreira Patrício

#### Learning outcomes and competences

- At the end of the course unit the learner is expected to be able to: 1. Show high level of technical competence in silviculture regarding to the production systems of the principal temperate forest species, their ecology and silvicultural management models. The students have to obtain practical skills in forest production sustainability.
   The students are expected to be able to: - Plan an afforestation considering the ecological, climatic and soil characteristics as well as the management objectives

- The students are expected to be able to Plan an anticestation considering the ecological, climatic a and make a forest management plan,
   Manage forest stands according to the quality of the site,
   Manage the composition in mixed stands,
   Apply techniques improving the natural regeneration. Use techniques of close-to-nature silviculture

#### Prerequisites

Before the course unit the learner is expected to be able to:

The students should have basic Knowledge of soils, ecology, dendrology and phytosociology.
 Know silvicultural techniques, statistics and computing science.

#### Course contents

Silvicultural systems. Ligniculture and arboriculture for timber. Broadleaves silviculture of rapid, medium and slow growth. Production systems of the principal temperate forest species. Growth and yield of the forest stands. Management composition in mixed stands. Management of natural regeneration. Pure or mixed uneven-aged stands. Close-to-nature silviculture.

#### Course contents (extended version)

- 1. Major silvicultural systems
- Determinants of afforestation
   Sustainable management and climate change
   Selection of species
  - Adaptive silviculture
- 3. Hardwood silviculture for wood production
  - The value of the standing tree The location in the stand
- The vigour
   The quality, size and form of the tree
   Singularities and defects
   The stands of hardwoods

  - Production targets Technical aspects of the hardwood silviculture Artificial and natural regeneration Silvicultural treatments

  - Frame trees

- Silvicultural treatments
  Frame trees
  Intermediate cuttings: cleanings, prunings, thinnings
  Silvicultural management models for broadleaves
  Silvicultural management models for coppice stands
  Silvicultural management models for high forest stands
  Ecology, Silviculture and yield of mixed stands
  Types of mixtures
  Complementarity and facilitation processes
  Mixed stands with nitrogen fixing secundary species
  Composition and proportions of the mixtures
  Additive and substitutive designs
  Types of yields
  Silvicultural management models for mixed stands
  Types of yields
  Silvicultural management models for mixed stands
  Toduction systems of the major forest broadleaf species in Portugal
  Ecology and silviculture of the chestnut
  Forest and agroforest systems
  High forest and coppice management
  Silvicultural management models
  Ecology and silviculture of the eucalyptus
  Silvicultural management models
  Ecology and silviculture of cork oak and holm
  Ecology and silviculture of cork oak and holm
  Ecology and silviculture of cork radius
  Ecology and silviculture of cork oak and holm
  Ecology and silviculture of cork oak and holm
  Ecology and silviculture of cork oak and holm
  Ecology and silviculture of cherry
  Ecology and silviculture of other hardwoods
  Silviculture on the form formation formation formation

- 13. Ecology and silviculture of other hardwoods 14. Silviculture of coniferous for wood production
- Ecology and silviculture of pine
   Ecology and silviculture of other softwoods
- 15. Continuous cover forestry, Close-to-nature silviculture

## Teaching and learning methods

Theoretical lectures with multimedia support. Practical lessons of forest management plans based on growth and yield predictions. Fieldwork to practice technical skills of management techniques and case study. Field trips in the context of the subject's topics. Independent studies and reports on assignments. Quizzes

#### Assessment methods

Alternative 1 - (Regular, Student Worker) (Final)

 Practical Work - 40%
 Final Written Exam - 60%

 Alternative 2 - (Regular, Student Worker) (Supplementary, Special)

 Final Written Exam - 100%
