

Course Unit	Microbiology and Immunology	Field of study	Biology and Biochemistry
Bachelor in	Veterinary Nursing	School	School of Agriculture
Academic Year	2023/2024	Year of study	1
Type	Semestral	Semester	1
Workload (hours)	162	Contact hours	T - TP - PL - TC - S - E - OT - O -
		Level	1-1
		Code	9085-783-1105-00-23
		ECTS credits	6.0

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s)

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. To understand the mechanisms evolved in interactions between microorganisms and environment, humans and animals.
2. To correlate the physiological characteristics of microorganisms with pathogenicity.
3. To understand the basic concepts of infection, epidemiology, immunity, diagnosis, pathogenicity, prevention and chemotherapy of microbial infections

Prerequisites

Before the course unit the learner is expected to be able to:
Not applicable

Course contents

Taxonomy. Morphology and structure of bacteria and fungi . Nutrition and growth. Human microbiome and its influence on health . Cells and organs of immune system ; antigens, antibody and TCR. Complement. Humoral and cellular immunity. Hypersensitivity, tolerance/auto-immunity. Laboratory classes: Control of microorganisms; pure culture and staining techniques; microbial growth; microbial susceptibility to chemotherapeutic agents; total and differential counting of leucocytes, immunoprecipitation and immunodiffusion tests.

Course contents (extended version)

1. Microbiology as a science.
2. Prokaryotic cell structure and morphology
3. Classification system . of living organisms.
4. Cultivation and growth of microorganisms.
5. Bacterial pathogenicity
 - Human microbiome /gut microbiome
6. Overviews of the immune system
7. Immunity and the immune response.
8. Hematopoiesis. Cells and organs of the immune system.
9. Humoral and cellular immunity. Antigens. Antibody – structure and classes.
10. Inflammation.
11. MHC molecules and genes. Antigen processing and presentation.
12. Immediate and delayed hypersensitivity.
13. Cells and colonies morphology. Preparation of culture media and sterilization.
14. Pure culture techniques. Staining techniques. Microbial susceptibility to chemotherapeutic agents.
 - identification of *S. aureus* coagulase positive from milk samples
15. Wright's staining of leucocytes. Counting of leucocytes and erythrocytes.

Teaching and learning methods

Conventional lectures; use of power point presentations and internet resources. Laboratory classes. Course materials available in the e-learning platform.

Assessment methods

1. coursework - (Regular) (Final, Supplementary, Special)
 - Intermediate Written Test - 30% (1st written exam)
 - Final Written Exam - 30% (Final written exam)
 - Practical Work - 40% (Written laboratory exam)
2. Final written exam - (Regular, Student Worker) (Final, Supplementary, Special)
 - Final Written Exam - 100% (written exam)

Language of instruction

Portuguese
