

Course Unit	Math Analysis		Field of study	Mathematics and statistics	
Bachelor in	Food Engineering		School	School of Agriculture	
Academic Year	2023/2024	Year of study	1	Level	1-1
Type	Semestral	Semester	1	ECTS credits	6.0
Code	9087-641-1101-00-23				
Workload (hours)	162	Contact hours	T	-	TP
			PL	-	TC
			S	-	E
			OT	-	O

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) Paula Sofia Alves do Cabo

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. Understand the fundamentals of integral calculus.
2. Use differential and integral calculus to solve practical problems.
3. Solve Differential Equations.

Prerequisites

Before the course unit the learner is expected to be able to:

1. Solve equations and inequations.
2. Understand functions of real variables: manipulation of graphs, limits and derivation.

Course contents

Integral calculus in R: Primitives and integrals (integration by parts and by substitution). Apply integrals to the determination of area. Functions of several variables: partial derivatives, derivatives of composite and implicit functions, optimization of functions, with and without restrictions. Differential Equations.

Course contents (extended version)

1. Integral calculus: Primitives and Defined Integration.
 - Definition of primitive and indefinite integral.
 - Integration methods: Direct integration, integration by parts and by substitution.
 - Defined Integral: definition and geometric interpretation. Fundamental theorem of Calculus.
 - Application of integral calculus to the determination of surface area.
2. Chapter 3 – Functions of several variables
 - Definition of the concept of the function of several variables
 - Geometric interpretation.
 - Definition of the concept of partial derivation. Higher-order partial derivatives.
 - Derivation of composite functions of several variables
 - Derivation of implicit functions of (one and of) several variables
 - Maximums and minimums of functions of several variables
 - Conditional maximums and minimums. Method of the multipliers of Lagrange.
3. Ordinary Differential Equations (E. D. O)
 - Homogeneous and not homogeneous E. D. O of 1st order. Geometric interpretation.
 - Analytical resolution of E. D. O. to the separable variables or reductive to this form.

Recommended reading

1. A. Quarteroni, R. Sacco e F. Saleri, "Numerical Mathematics", in Texts in Applied Mathematics, 37, 2nd edition Springer Berlin Heidelberg, 2007.
2. T. Apostol, Calculus, vol. I, 2nd edition, Editorial Reverté, Lda., 1999.
3. N. Piskounov, Cálculo Diferencial e Integral, vol. 1 e 2, Edições Lopes da Silva, 2000.
4. M. Ferreira e I. Amaral, Primitivas e Integrais, Edições Silabo, 2006.

Teaching and learning methods

Lectures and problem-solving sessions for introduction and exploration of theoretical concepts and application of the concepts through the resolution of problems. Knowledge integration by the assignment of practical works.

Assessment methods

1. Alternative 1 - (Regular, Student Worker) (Final)
 - Intermediate Written Test - 30%
 - Intermediate Written Test - 25%
 - Intermediate Written Test - 20%
 - Final Written Exam - 25%
2. Alternative 2 - (Regular, Student Worker) (Final)
 - Intermediate Written Test - 25%
 - Intermediate Written Test - 20%
 - Intermediate Written Test - 15%
 - Practical Work - 20%
 - Final Written Exam - 20%
3. Alternative 3 - (Regular, Student Worker) (Final, Supplementary, Special)
 - Final Written Exam - 100%

Language of instruction

Portuguese, with additional English support for foreign students.
