

Course Unit	Environmental Engineering	Field of study	Environment Technology
Master in	Chemical Engineering	School	School of Technology and Management
Academic Year	2025/2026	Year of study	2
Type	Semestral	Semester	1
Level	2-2	ECTS credits	6.0
Code	6362-756-2101-00-25		
Workload (hours)	162	Contact hours	T - TP 30 PL 30 TC - S 2 E - OT - O -

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) Ramiro José Espinheira Martins

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:
To design and monitoring a plant for: drinking water production; domestic and industrial wastewater treatment; water quality control in leisure equipments (swimming pool, Spa).

Prerequisites

Before the course unit the learner is expected to be able to:
It doesn't have.

Course contents

Study of physical and chemical water parameters; natural water sources (superficial and underground waters). Sampling of waters. Physical and chemical treatments of drinkable and leisure waters, and liquid effluents. Design and implementation of autonomous treatment units and insert in a treatment layout employing biological processes (aerobic and anaerobic). Theoretical concepts and design of treatment facilities of domestic/industrial wastewaters by waste stabilization ponds technology.

Course contents (extended version)

1. Introduction to water quality and water pollution
 - Introduction.
 - Uses of water.
 - Water quality requirements.
 - Water pollution.
2. Wastewater characteristics
 - Wastewater flowrates.
 - Wastewater composition.
3. Sampling of waters
 - Planning of sampling; types of samples.
 - Techniques for collecting and sampling of water (human consumption and wastewater).
 - Sampling material and cleaning. Conservation, transportation and preservation of samples.
 - Processes of sampling quality control.
4. Physical and chemical parameters of water.
 - Physical parameters: temperature, colour, turbidity, smell, taste, suspended and dissolved solids.
 - Settleable solids, conductivity and pH.
 - Organic chemical parameters: biochemical oxygen demand and chemical oxygen demand.
 - Oxidability to KMnO₄, total organic carbon, total oxygen demand, oils and fats.
 - Detergents and volatile organic compounds.
 - Inorganic chemical parameters: alkalinity/acidity, hardness, iron and manganese and nitrogen.
 - Phosphorous, sulfates, chlorides, heavy metals, dissolved oxygen, redox potential and sulfides.
5. Physico-chemical treatments of liquid effluents (design):
 - Liquid effluents (domestic and industrial wastewaters). Pretreatment and primary treatment.
 - Design of treatment units : solids removal.
 - Equalization; neutralization.
 - Settling: discrete, flocculant and zonal; flotation; wastewater aeration.
6. Design of independent treatment units and insert in a biological treatment layout.
 - Microbial metabolism. Essential microorganisms in biological treatments.
 - Microbial growth and kinetic.
 - Biological processes of wastewater treatment: aerobic (suspended and fixed biomass).
 - Biological processes of wastewater treatment: anaerobic (fixed biomass).
 - Removal of biological nutrients.

Teaching and learning methods

Theoretical lessons: explanation of the theoretic concepts. Practice lessons: to analyse real or simulated problems and suggest a solution; discussion about the better solution. Not-presential period: Individual/group study and preparation of exercises and topics proposed.

Assessment methods

1. Alternative 1 - (Regular, Student Worker) (Final)
 - Practical Work - 20% (Class problem-solving on the design and sizing of wastewater treatment systems.)
 - Intermediate Written Test - 30%
 - Final Written Exam - 50% (minimum mark of 7)
2. Final exam - (Regular, Student Worker) (Supplementary)
 - Final Written Exam - 100%

Language of instruction

1. English
2. Portuguese
