Name(s) of lecturer(s) Larysa Viktorivna Savosh, Nuno Filipe Lopes Moutinho

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

- Lunderstand the national account's objectives and interpret the different macroeconomic variables;

 Describe the macroeconomy using aggregate demand and aggregate supply analysis;

 Analyse the behaviour of the different variables that define the real market, the monetary market and the global market;

 Interpret economic phenomena: inflation, unemployment, economic cycles, wage policies and management of natural resources;

 Understand the causes and effects of inflation and unemployment in the economy, in general, and in the company decisions, in particular;

 Understand the different types of economic policies available for the authorities in order to achieve equilibrium in the different markets;
- 7. Select, analyse and understand economic information, related to the analysed subjects collected from numerous available sources.

Prerequisites

Before the course unit the learner is expected to be able to: Apply basic quantitative methods.
