

Course Unit Structural Analysis I			Field of study	Mechanics of Materials and Structural Concrete		
Bachelor in	Civil Engineering			School	School of Technology and Management	
Academic Year	2023/2024	Year of study	2	Level	1-2	ECTS credits 6.0
Туре	Semestral	Semester	2	Code	9089-322-2201-00-23	
Workload (hours)	162	Contact hours			C - S - solving, project or laboratory; TC -	E - OT - O - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s)

Debora Rodrigues de Sousa Macanjo Ferreira

## Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

Study the principles of behavior of reticulate structures and apply the force method to calculate these structures
 Study and apply the influence line concept
 Actions and combination of actions

#### Prerequisites

Before the course unit the learner is expected to be able to: 1. Analyse statically determinate continuous structures 2. Obtain the internal forces and diagrams

## Course contents

Force method. Energy theorems: application on structural analysis. Influence lines. Symmetry simplification in hyperstatic structures. Actions and combination of actions

## Course contents (extended version)

- 1. Chapter 1 Analysis of statically indeterminate structures
  - Plane trusses
     Continuous structures
  - Mixed structures
- 2. Chapter 2 Energy Theorems
  - Theorem of virtual works applied to continuous and trusses structures
     Theorem of Clayperon
     Theorem of Betti and Maxwell's reciprocal theorem
- Theorem of Castigliano
   Theorem of Castigliano
   Theorem of Menabrea
   Chapter 3 Calculation of displacements in isostatic structures using the theorem of virtual work
   Calculation of displacement in isostatic truss structures
   Calculation of displacement in isostatic continuous structures
   Chapter 4 Force Method
   Conducting of the prostetion trusped structures

- 4. Chapter 4 Force Method

  Calculation of hyperstatics trusses structures
  Calculation of statically indeterminate structures
  Calculation of displacements in statically indeterminate structures using theorem of virtual work

  5. Chapter 5 Influence lines

  6. Chapter 6 Actions and combination of actions

#### Recommended reading

- Sebenta "Teoria das Estruturas" -Prof. Paulo Vila Real
   Sebenta "Teoria das Estruturas" FEUP
   Sebenta "Exercicios resolvidos de Estruturas I" Prof. Joaquim Barros e Salvador Dias, Universidade do Minho
   "Structural analysis" Alexander Chapes, Prentice Hall, International Edition
- 5. Apontamento de Estruturas I Débora Macanjo Ferreira

#### Teaching and learning methods

Theoretical-practical classes: Presentation and discussion of all contents in theoretical classes along with simple ilustration problems. In theoretical-practical classes a set of application associated to theoretical issues is proposed and discussed. Four complementary individual exercises will be proposed and evaluated.

Assessment methods
1. Alternative 1 - (Regular, Student Worker) (Final)
- Intermediate Written Test - 30%
- Intermediate Written Test - 20%
- Final Written Exam - 50%
<ol><li>Alternative 2 - (Regular, Student Worker) (Supplementary, S</li></ol>
- Final Written Exam - 100%

# Language of instruction

Accompant mathada

Portuguese, with additional English support for foreign students.
