Name(s) of lecturer(s) Maria Clara Rodrigues Bento Vaz Fernandes

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

- At the end of the course unit the learner is expected to be able to:

 1. Understand and manipulate the most common methods for forecasting demand.

 2. Characterize and parametrize models of inventory management, deterministic and stochastic, to manage product inventory with independent demand.

 3. Know the planning processes for different types of production systems and associated layouts.

 4. Characterize and manipulate the most common techniques used for planning and control production systems associated with the paradigms Pull and Push.

 5. Understand and manipulate the main tools Lean and Kaizen to reduce waste in production systems.

Prerequisites

Before the course unit the learner is expected to be able to: Know basic Statistics competences.

Course contents

Forecasting methods. Management of stocks. Production planning. Planning and control of production systems associated with the Pull and Push paradigms. Principles of elimination/reduction waste and Kaizen and Lean tools.

Course contents (extended version)

- Forecasting methods
 Classification of the forecasting methods;
 Forecasting tools for chronological series;
 Basic tools for exploring data;
 The cast of th
- Times series decomposition methods and calculation of moving averages: Ilmes series decomposition methods and calculation of Exponential smoothing. Holt and Holt-Winters methods.

 Management of stocks
 Stock costs and economic quantity;
 Continuous review and periodic review methods;

 Outstitudiaculate.

- Quantity discounts; Stochastics and deterministics models;
- Models with constraints regarding capital, storage space and number of orders;
 Aggregated management of orders;
 ABC Analysis.

 3. Production Planning;
- - Planning function;Production structures;
 - Production per project;
 Production to order;

 - Production batch;
- Continuous production
- Systems of planning and control of production associated with the paradigms Pull and Push
 Method MRP (Material Requirements Planning);

 - Just in time system; Types of kanban;
- Hybrid systems.
 5. Principles of elimination/reduction waste and Kaizen and Lean tools.

Teaching and learning methods

The lectures are devoted to present the theorical concepts and analysis of small examples. Practical classes are devoted to solve the exercises under supervision. Non-presential hours are devoted to study real problems where the studied models can be applied taking into account the specificities and interests of students.

Assessment methods

- Alternative 1 (Regular, Student Worker) (Final, Supplementary, Special)
 Final Written Exam 100%
 Alternative 2 (Regular, Student Worker) (Final, Supplementary)
 Intermediate Written Test 40%
 Final Written Exam 40%
 Portfolio 10% (The Portfolio includes the excel files with the exercises performed during the lessons.)
 Practical Work 10% (It includes consulting and discussion technical articles on topics to consolidate knowledge.)

Language of instruction

Portuguese, with additional English support for foreign students.
