

Course Unit	Unit Software Engineering			Field of study	Information Systems	
Bachelor in	Informatics Engineering			School	School of Technology and Management	
Academic Year	2023/2024	Year of study	2	Level	1-2	ECTS credits 6.0
Туре	Semestral	Semester	2	Code	9119-706-2204-00-23	
Workload (hours)	162	Contact hours	1 00 11		C - S -	E - OT - O Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Isabel Maria Lopes, José Eduardo Moreira Fernandes Name(s) of lecturer(s)

### Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

- At the end of the course unit the learner is expected to be able to:

  1. Understand the context, fundamental concepts, and knowledge areas of Software Engineering

  2. Recognize the importance of modeling, of processes, and tools in software development

  3. Understand the typical phases and tasks of a software development process

  4. Possess fundamental skills on methodologies, tools, and techniques for object-oriented development of software systems

  5. Understand and use the UML modeling language

## Prerequisites

Before the course unit the learner is expected to be able to: 1. Have skills on reading and understanding English. 2. Have knowledge on programming.

#### Course contents

Context and general concepts of Software Engineering. Object-oriented (OO) paradigm. Modeling languages in the development of software systems. Software development processes and methodologies. Software requirements engineering. Construction of models in software development.

## Course contents (extended version)

- Fundamentals of Software Engineering
   Complexity and engineering in software development
   Software Engineering knowledge areas
   International organizations and information sources
   Fundamentals of software development
   Models and modeling languages
   CASE Tools
- - CASE Tools
     Process models of software development
- 3. Software modeling with UML
  - UML overview
- UNL Overview
   Major UML diagrams for functional, structural, and behavioral modeling
   Complementary topics of Software Engineering
   Contemporary methodological approaches
   Software requirements engineering

# Teaching and learning methods

The unit will be taught using lectures exposing theoretical concepts, practice classes for problem solving, and teacher-oriented self learning.

## Assessment methods

- 1. Alternative 1 (Regular, Student Worker) (Final)
   Practical Work 25%
   Intermediate Written Test 75%
  2. Alternative 2 (Regular, Student Worker) (Supplementary)
   Practical Work 25% (The works considered are those carried out and evaluated during the semester.)
   Final Written Exam 75%
  3. Alternative 3 (Regular, Student Worker) (Special)
   Final Written Exam 100%

## Language of instruction

- Portuguese
   English
