Name(s) of lecturer(s)

Carlos Alberto Rodrigues Andrade

# Learning outcomes and competences

- At the end of the course unit the learner is expected to be able to:
  1. Application of the methods used to communicate ideas trough free hand draw techniques with drafts and CAD tools, also must know engineering principles for mechanical design application.

- 2. The students make use on the development of mechanical engineering design trough the computer added drawing tools.
  3. Representation and interpretation of objects trough their projections.
  4. Developing the ability of spacial visualization of objects.
  5. Application of computer graphics for drawing and representation in two and three dimension of parts.
  6. Pipping representation in 2D and isometric.

### Prerequisites

- Before the course unit the learner is expected to be able to: 1. Descriptive geometry basic knowledges. 2. Technical English basic knowledges.

#### Course contents

Drawing rules and standardization; Basic rules in free hand representation; Projections; Representation of orthogonal object views; Cuts and sections; Perspectives; Dimensioning; Pipping.

### Course contents (extended version)

- 1. Drawing rules and standards:

- Drawing rules and standards:

   Paper size and shape; Drawing sheet scheme; Title and sub-title; Writing; Line type and shape (2h).

   Free hand orthographic representation basic rules:

   Projections: Idea of projection; Projection systems: conic; parallel; Axonometric (4h).

   Orthographic model view representation:

   Model view selection; local view; particular view; auxiliary view (primary and secondary) (6h).
   Make use of 2D software for model view representation (14h).

   Cuts and sections: Interpretation; Representation; Patterns. Cut types:

   Total; half; cut; By parallel plane; By cross plane; By several plane; Auxiliary, partial cuts (4h).
   Sections; (2 hours);

- 5. Perspectives:
   Make use of isometric drawing sheets for sketches (12h).
   Interpretation of section cuts (2 hours).

- Dimensioning:
   Nominal dimension; dimension elements; Nominal dimension of objects (4h).
- Isometric pipping drawings.
   Orthogonal views; 3D normalized views (4h).
   Short introduction to assembly drawings.

## Recommended reading

# Teaching and learning methods

The curricular unit is developed in lectures making use of expository multimedia methods of theory and practice. To the students are given several exercises related with the subject to maintain and develop the knowledge acquired. Are useful computers adapted and prepared for evolved 2D and 3D modeling with CAD software.

# Assessment methods

- Alternative 1 (Regular, Student Worker) (Final)

   Final Written Exam 100%

   Alternative 2 (Regular, Student Worker) (Supplementary, Special)

   Final Written Exam 100%

# Language of instruction

#### 1. Portuguese

2. Portuguese, with additional English support for foreign students.
