

Course Unit	Automation Systems			Field of study	Automation	
Master in	Industrial Engineering - Electrical Engineering			School	School of Technology and Management	
Academic Year	2022/2023	Year of study	1	Level	2-1	ECTS credits 6.0
Туре	Semestral	Semester	1	Code	9572-355-1105-00-22	
Workload (hours)	162	Contact hours	1 00 17		C - S -	E - OT - O Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other
			1 - Lectures, 11 - Lectures a	na problem-solving, i E - i robiem-	Solving, project or laboratory, 10	- Fiction of the Community of the Commun

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

- Know the industrial automation technologies and systems, namely robotics, numerical control, automatic storage and transport systems, production and assembly lines, and computer aided tools.

- lines, and computer aided tools.

 2. Obtain knowledge of industrial robotics, namely in terms of classification, kinematics, sensors and actuators, and typical applications.

 3. Operate and program industrial robots.

 4. Knowledge about flexible Manufacturing Systems (FMS), Computer Integrated Manufacturing (CIM), and ISA 95 automation control architecture.

 5. Obtain knowledge of lean manufacturing techniques.

 6. Obtain knowledge of cyber-physical systems, digital twin, multi-agent systems and RAMI 4. 0 reference architecture.

 7. Model and analyze discrete event-driven systems using Petri nets.

 8. Design, implement, digitalize and integrate automation equipment, cells or processes at the shop floor level.

Prerequisites

- Before the course unit the learner is expected to be able to:

 1. Execute operations using Boolean algebra, binary arithmetic and numeration systems.

 2. Apply the basic concepts of industrial automation, namely programmable logic controllers.

 3. Elaborate computational programs.

Course contents

Introduction to industrial automation systems. Technologies of industrial automation systems. Computer integrated manufacturing. Integration of manufacturing systems. Lean manufacturing techniques. Industry 4. 0 and cyber-physical systems. Modeling discrete event-drive system using Petri nets.

Course contents (extended version)

- 1. Introduction to industrial automation systems
- Introduction to industrial automation systems
 Definition, automation types, production types, production activities and manufacturing functions.
 Technologies of industrial automation systems
 Industrial robotics, numerical control, automatic storage and transport systems.
 Computer integrated manufacturing
 Flexible manufacturing systems (FMS), computer integrated manufacturing (CIM).
 Computational tools to support manufacturing activities (CAD, CAM, CAE, CAPP, etc.).
 ISA 95 automation control architecture.
 Manufacturing control systems.
 Integration of manufacturing systems
 Need for the integration of systems and associated problems.
 Integration levels. Mechanisms and architectures for integration. Interoperability.
 Service-orientated architectures.

- Service-orientated architectures.
 Lean manufacturing
 Definition, types of waste, benefits.
 Analysis of lean techniques, namely Kanban, Poke-Yoke, 5SSs, SMED and Six Sigma.
 Industry 4. 0 and cyber-physical systems
 Concept, main design principles, benefits and impact.
 Cyber-physical systems and digital twin.
 Digital technologies, namely IoT, artificial intelligence, HMI and collaborative robots.
 Multi-agent systems.

- Nutil-agent systems.
 RAMI 4. 0 architecture and digitalization of assets.
 Modeling discrete event-drive system using Petri nets
 Modeling analysis and requirements. Modeling languages for discrete event-driven systems.
 Petri nets: definition, symbology, basic rules and properties.
 Analysis and validation of Petri nets.
 Temporized Petri nets. High-level Petri nets.

Recommended reading

- "Automation, Production Systems and CIM", M. P. Groover, Prentice-Hall, 1987.

- "Computer Systems for Automation and Control", Gustaf Olsson, G. Piani, Prentice Hall, 1992.
 "Industry 4. 0, "The Industrial Internet of Things", Alasdair Gilchrist, Apress, 2016.
 "Applications of Petri Nets in Manufacturing Systems. Modelling, Control and Performance Analysis", Alan A. Desrochers and Robert Y. Al-Jaar, IEEE Press, 1994.
 "Handbook of Robotics", B. Siciliano, O. Khatib (eds), Springer, 2nd edition, 2017.

Teaching and learning methods

Theoretical classes: exposition of the proposed topics. Practical classes: realization of exercises and laboratorial works to help to consolidate the expected learning outcomes. Learning complemented with sessions dedicated to research and discussion, to be developed preferentially during the non-presential hours, and which also enhance transversal skills.

Assessment methods

- Alternative 1 (Regular, Student Worker) (Final, Supplementary, Special)
 Final Written Exam 50% (The approval requires the achievement of a minimum score of 35%.)
 Laboratory Work 50% (Considers the results obtained in the laboratory works and the participation in the classrooms.)

Language of instruction

Portuguese, with additional English support for foreign students.
