

Course Unit Artificial Intelligence			Field of study	Computing Science		
Bachelor in	r in Game Design			School	School of Public Management, Communication and Tourism	
Academic Year	2022/2023	Year of study	3	Level	1-3	ECTS credits 6.0
Туре	Semestral	Semester	1	Code	8309-414-3105-00-22	
Workload (hours)	162	Contact hours	T - TP T - Lectures; TP - Lectures a	15 PL 45 T nd problem-solving; PL - Problem-	C - S - solving, project or laboratory; TC -	E · OT · O · Fieldwork; S · Seminar; E · Placement; OT · Tutorial; O · Other

## Name(s) of lecturer(s)

João Paulo Pereira de Sousa

Learning outcomes and competences

- At the end of the course unit the learner is expected to be able to: 1. Discern when should use a classical solution and discern when should use an inductive solution 2. Establish a chronological and functional sight on the techniques of AI and its connections to other sciences 3. Know and understand the functioning of the artificial intelligence main models 4. Implement properly the AI knowledge in solving practical problems 5. Understand the limitations and advantages of the AI techniques 6. Adapt the AI techniques to specific case studies, for example: Pattern Recognition problems; path finding; games.

## Prerequisites

- Before the course unit the learner is expected to be able to:
- 1. Know how to implement algorithmic solutions in a classical mode 2. Know the fundamentals of linear algebra and logic.

### Course contents

Introduction to Artificial Intelligence. Chasing and evading. Pattern, flocking and potential function-based movement. Basic and A\* pathfinding. Scripting. State machines. Fuzzy logic. Rule-based AI. Basic probability. Decisions under uncertainty. Neural networks. Genetic algorithms. Practical implementation of multiple cases. Designing game AI.

#### Course contents (extended version)

- . Introduction to Artificial Intelligence 2. Chasing and evading (in tiled and continuous environments) - Basic chasing and evading - Line-of-sight - Intercepting
  3. Pattern movement (in tiled and continuous environments)
- 4. Flocking Follow the leader
- Obstacle avoidance using feelers
   5. Potential function-based movement
  - Lennard-Jones potential function Swarm movement
- Swam movement
   Obstacle avoidance using potential functions
   6. Basic pathfinding (in tiled and continuous environments)
   Random obstacle avoidance
   Tracing around obstacles
   Breadcrumb pathfinding
   Warpoints

  - · Waypoints
- A\* pathfinding
   Search area

- Path scoring
  Finding dead ends
  Terrain cost
  Influence mapping

- a. State machines
  Basic state machine model
  Finite state machines
  Nested state machines

- Hierarchical state machines
   Hierarchical state machines
   Fuzzy logic
   O. Goal-Oriented Behavior.
   Ansie probability
   Probability rules
   Conditional probability
   2 Decisions under upcodatisty
- 12. Decisions under uncertainty Bayesian networks
- 13. Designing games IA The Design
- Shooters
- Driving Real-Time Strategy
- Sports
- Turn-Based Strategy Games 14. Neural networks and genetic algorithms.
- 15. Strategy

### Teaching and learning methods

The theoretical-practical classes are performed at computer rooms (60 hours): There are exposure and explanation of concepts followed by computational experiments when appropriate. The non-presence period (98 hours): They are formed by individual or group study of selected topics accompanied by reading of literature and implementation of practical projects.

## Assessment methods

- Distributed assessment (Regular, Student Worker) (Final, Supplementary, Special)

   Practical Work 65% (Four projects. Minimum score of 8. One of the works will be the Project between Curricular Units.)
   Final Written Exam 30% (Written test. Minimum score of 8 points.)
   Projects 5% (Project developed under the Interdisciplinary Week.)

   Exchange students (Regular, Student Worker) (Final, Supplementary, Special)

   Practical Work 65% (Four projects. Minimum score of 8. One of the works will be the Project between Curricular Units.)
   Practical Work 65% (Four projects. Minimum score of 8. One of the works will be the Project between Curricular Units.)
   Final Written Exam 30% (Two written test. Minimum score of 8 points.)
   Projects 5% (Project developed under the Interdisciplinary Week.)

# Language of instruction

Portuguese, with additional English support for foreign students.
