

Course Unit	Object-Oriented Programming		Field of study	Computer Science	
Bachelor in	Multimedia		School	School of Public Management, Communication and Tourism	
Academic Year	2021/2022	Year of study	1	Level	1-1
Type	Semestral	Semester	2	ECTS credits	6.0
Workload (hours)			162	Contact hours	
			T	-	TP
			60	PL	-
			TC	-	S
			E	-	OT
			O	-	
Code 9213-656-1204-00-21					

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) António José Gonçalves Mourão, Jose Manuel Seixas Alves

### Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. Identify the guiding principles of object oriented programming
2. Implement solutions based on problems descriptions and Class Diagrams.
3. Define classes, objects, attributes and method, identifying and defining the needed constructors to the correct instance initialization
4. Implement aggregation.
5. Identify and implement inheritance between classes and establish class hierarchies. Understand and implement interfaces.
6. Understand the concept of polymorphism and implement it.
7. Understand the concept of abstract.

### Prerequisites

Before the course unit the learner is expected to be able to:

1. Elaborate logical reasoning for the resolution of problems
2. Create programs using the procedural paradigm

### Course contents

Object-Oriented Programming definition. Principles of Object Oriented Programming. Concepts of object-oriented modeling. Introduction to the C# language. Class definition in C#. Implementation of associations. Class and functions templates. Implementation of inheritance and class hierarchies. Dynamic memory management inside a class. Interfaces and multiple inheritances. Input and output.

### Course contents (extended version)

1. Object Oriented Programming definition
  - Motivation
  - Basic concepts
2. Principles of Object Oriented Programming
  - Encapsulation
  - Inheritance
  - Polymorphism
3. Concepts of object oriented modeling
  - Class diagrams using UML
  - Associations between classes: simple, aggregation and inheritance
  - Overriding and adding new features. Abstract classes. Multiple inheritance.
4. Introduction to the C# language
  - Declarations
  - Constants
  - Data types
  - Expressions and operators
  - Flow control
  - Functions
5. Class definition in C#
  - Attributes
  - Constructors. Constructors categories.
  - Methods
6. Basic features of C#
  - Object arrays. Self reference
7. Implementation of aggregation
8. Function and class templates
9. C# Standard libraries
  - String class
  - ArrayList class
10. Implementation of associations
  - 1-N associations
  - N-N associations
  - Associative classes
11. Multiple inheritance
  - Multiple occurrence of the base class
  - Interfaces
12. Input and output data.

3. Rumbaugh, J. (1991). Object-Oriented Modeling and Design. (3ª Edição). Prentice Hall. [ISBN 0-201-49834-0]
4. LOUREIRO, H. (2017). C# 7. 0 COM VISUAL STUDIO - CURSO COMPLETO. FCA. [ISBN: 978-972-722-868-3]

### Teaching and learning methods

Lecture classes of theoretical concepts followed by practical discussion of model examples. Concept application through small problem solving. Practical experience is developed with the resolution of a larger problem. Execution of a final project assignment.

**Assessment methods**

- Distributed Evaluation - (Regular, Student Worker) (Final, Supplementary, Special)
- Experimental Work - 15% ((optional) Weekly challenges to be solved outside of the classroom)
- Practical Work - 35% ((mandatory) Minimum 7,5 points)
- Final Written Exam - 50% ((mandatory) Minimum 7,5 points. 65% if grade is higher than Trab. Experimental.)

**Language of instruction**

Portuguese, with additional English support for foreign students.

**Electronic validation**

António José Gonçalves Mourão	Ana Lucia Jesus Pinto	Elisabete da Anunciacao Paulo Morais	Luisa Margarida Barata Lopes
