

Course Unit	Nutrigenomics			Field of study	Therapy and Rehabilitation	
Bachelor in	Dietetics and Nutrition			School	School of Health	
Academic Year	2021/2022	Year of study	3	Level	1-3	ECTS credits 4.0
Туре	Semestral	Semester	2	Code	8149-501-3204-00-21	
Workload (hours)	108	Contact hours			C - S	E - OT 5 O Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other
Name(s) of lecturer(s) Carina de Fatima Rodrigue						

Learning outcomes and competences

- At the end of the course unit the learner is expected to be able to:

 1. To understand the nutrigenomics as a multidisciplinary biosciense.

 2. To know the role of genetic variation in health and disease.
- To know the fole of genetic variation in health and disease.
 To know the organization of human genome and the principal aspects related to gene expression modulation.
 To know the principal research lines in nutrigenomics and health (chronic diseases).
 To apply the knowledge about specific target genes modulation to predict the effect of a nutrient.
 To know the effect of epigenetic phenomen on nutrigenomics.
 Understand the possibility to transform knowledge on nutrigenomics in personalized nutrition counselling.
 To Identify the need of ethical guidelines for nutrigenomics research.

Prerequisites

Not applicable

Course contents

The new tools that allowed to understand the human genetic variability. Genomic programing and reprograming. Nutrient and genes inteactions at molecular level. Chronic diseases prevention. Research lines and networks in nutrigenomics.

Course contents (extended version)

- 1. Introdution to nutrigenomics:
 - Concepts;
 - Impact in human health
 - Structure and Function of nucleic acids review and human genome organization.
 - Mendelian Genetics: types of gene transmission;
 Interaction of molecules with genes;
 Control of gene expression;
 Genetic variability;
 How Bioactive food components work;
- How Bloactive rood components work,
 2. Target genes associated:
 Acid folic deficiency
 To Obesity, Type 2 diabetes and Metabolic syndrome;
 To Osteoporosis;
 To Osteoporosis;

 - To Inflamation;
- To Inflamation;
 Molecular mechanisms of longevity regulation and calorie restriction.
 Vitamin D Deficency
 To certain cancers types and cardiovascular diseases;
 Maternal effect in development (epigenetic effects).
 Nutrigenomics in practice and Individualized health assessment.
 Nutrigenomics and Pharmacogenomics.
 Impact on Public health
 Ethical issues in nutrigenomics.

Teaching and learning methods

The theoretical lessons will use the expository method. The course will include a practical component where students will work on some of the topics addressed, including in the most current and relevant DNA manipulation basic methods. Reading and analysis of current articles on nutrigenomics and different lines of research.

Assessment methods

- Alternative 1 (Regular, Student Worker) (Final)
 Intermediate Written Test 100% ((75% PT and 25% PL))
 Alternativa 2 (Regular, Student Worker) (Supplementary, Special)
 Final Written Exam 100% ((75% PT e 25 PL))
