

Course Unit	Pharmacotoxicology			Field of study	Pharmacy		
Bachelor in	Pharmacy			School	School of Health		
Academic Year	2022/2023	Year of study	3	Level	1-3	ECTS credits	5.0
Туре	Semestral	Semester	1	Code	9549-644-3104-00-22		
Workload (hours)	135	Contact hours		60 PL - T	C - S		
Name(s) of lecturer(s)  Joana Cristina Mendes Martins Coelho							

#### Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. Conceptualize Pharmacotoxicology emphasizing its relevance, fields of action and policy areas of actuation and Apply correct terminology in the field of Pharmacotoxicology.

2. Explain the address of the standard of the course of the standard of the course of the standard of t

- 2. Explain the adverse effects of pharmacotherapy and the aspects in monitoring drug therapy.

  3. Differentiate the characteristics of the stages of exposure to xenobiotic agents and describe the nature of the process of absorption, distribution, biotransformation 3. Differentiate the characteristics of the stages of exposure to xeriobiotic agents and describe the nature of the process of absorption, distribution, but and elimination of toxic agents
  4. Describe and differentiate the general mechanisms of action of toxic substances (drugs) and the determinants of toxicity in different places of action.
  5. Know the importance of some drugs and toxic agents more common and know how to evaluate their toxic potential for the individual.
  6. Differentiate products not submitted to prescription (MNSRM) of medicines submitted to prescription mean (MNSRM) and know their toxic effects.
  7. Understand and evaluate the potential interactions between medications. Know and evaluate therapy with antidotes in relation to an intoxication.
  8. Know the rules and general cares of prevention of poisoning such as procedures to be in their occurrence.

# Prerequisites

Not applicable

# Course contents

History of Pharmacotoxicology; Aspects and general principles of Pharmacotoxicology; Introduction to Pharmacotoxicology; Toxicity Medicines Non-prescription Medical; Toxicity of drugs Anti-Inflammatory and Autacoids; Toxicity of Drugs Affecting Specific Organs; Toxicity of Antimicrobial Drugs; Toxicity of Drugs Antimycobacterials and Antifungal; Toxicity not addressed to specific organs; Drug Interactions; No drug toxicity; Care to take a case of poisoning.

# Course contents (extended version)

- History of Pharmacotoxicology
   Aspects and general principles of pharmacotoxicology
   Concepts and basic principles of pharmacotoxicology
   Basic terminology of pharmacotoxicology
   Fields of action of Toxicology
   Practice Areas Toxicology
   Characteristics of exposure
   Classification of Toxic
   Dose response

  - Dose response
     Spectrum of desirable effects

- Spectrum of desirable effects
   Classification of poisonings

  3. Introduction to Pharmacotoxicology
   Pharmacokinetics versus Toxicokinetics
   Pharmacodynamics versus Toxicodynamic

  4. Toxicity Medicines Non-prescription Medical
   Concept Medicines Non-prescription Medical (MNSRM)

- Concept Medicines Non-prescription Medical (MNSRM)
   Paracetamol Toxicity
   Toxicity of Salicylates (Aspirin)
   Toxicity of Salicylates (Aspirin)
   Toxicity of Caffeine

  5. Toxicity of Drugs Anti-Inflammatory and Autacoids
   Toxicity of Drugs Anti-Inflammatory
   Toxicity of Drugs Atfecting Specific Organs
   Drugs affecting the Central Nervous System
   Drugs affecting the Central Nervous System
   Drugs affecting the Endocrine System
   Drugs affecting the Endocrine System
   Drugs affecting the Respiratory System
   Drugs affecting the Respiratory System
   Drugs affecting the Renal System
  7. Toxicity of Antimicrobial Drugs
   Principles of Antimicrobial Treatment
   Toxicity of Cell Wall Inhibitors
   Toxicity of Cell Wall Inhibitors
   Toxicity of Orugs Antimycobacterials
   Toxicity of Drugs Antimycobacterials
- Toxicity of Drugs Antimycobacterials
   Toxicity of Drugs Antimycobacterials
   Toxicity of Drugs Antifungal
   Toxicity not addressed to specific organs (Toxicity Effects of antineoplastic agents)
   Antimetabolites

  - AntibioticsAlkylating Drugs

  - Microtubule Inhibitors
     Steroidal Hormones and their Antagonists

  - Monoclonal Antibodies
    Other Chemotherapy Drugs
- Drug Interactions
   General considerations of Drug interactions
- General considerations of Drug Interactions
   Classification of interactions
   The role of the pharmacy professional in identifying drug interactions
   Classes of potentially interactive drugs
  1. Toxicology (No Drug Toxicity)
   Toxicity of Pesticides
   Toxicity of Heavy Metals
   Toxicity Effects of Solvents and Vapors

# Course contents (extended version)

- Antidotes
- 12. Care to take a case of poisoning

# Teaching and learning methods

Theorical- Practical Learning methods: Expositive method

#### Assessment methods

- 1. Theoretical and Practical: (Regular, Student Worker) (Final)
   Intermediate Written Test 35% (1st Intermediate Written Test (minimum grade of 8. 5 values according to pedagogical regulation).)
   Intermediate Written Test 35% (2nd Written Intermediate Test (minimum grade of 8. 5 values according to pedagogical regulation).)
   Development Topics 30% (Research work framed in the programmatic content of the subject.)

  2. Theoretical and Practical: (Regular) (Supplementary, Special)
   Final Written Exam 100% (Final Written Exam)

  3. Theoretical and Practical: (Student Worker) (Final, Supplementary, Special)
   Final Written Exam 100% (Final Written Exam)

  4. Theoretical and Practical: (Erasmus) (Regular, Student Worker) (Final, Supplementary, Special)
   Development Topics 100% (Research work framed in the programmatic content of the subject.)

# Language of instruction

- Portuguese
   Portuguese, with additional English support for foreign students.

# Electronic validation
