

Course Unit	Internship in Biomedical Laboratory Sciences II		Field of study	Biomedical Laboratory Sciences	
Bachelor in	Biomedical Laboratory Sciences		School	School of Health	
Academic Year	2022/2023	Year of study	4	Level	1-4
Type	Semestral	Semester	2	ECTS credits	30.0
Code	9995-550-4201-00-22				
Workload (hours)	810	Contact hours	T -	TP -	PL -
			TC -	S -	E 580
			OT 30	O -	

T - Lectures; TP - Lectures and problem-solving; PL - Problem-solving, project or laboratory; TC - Fieldwork; S - Seminar; E - Placement; OT - Tutorial; O - Other

Name(s) of lecturer(s) Ana da Conceicao Saraiva e Sousa Tavares, Celso Tome dos Santos Lopes, Jose Pedro dos Santos Neves, Rossana Pilar Marcelino Correia, Rute Alexandra Araujo da Costa Dominguez

Learning outcomes and competences

At the end of the course unit the learner is expected to be able to:

1. Develop and deepen knowledge and own practices , in the intervention of the Technical practice and Public Health
2. Demonstrate technical and scientific capabilities and practical application of knowledge acquired during the theoretical component / practice course
3. Reveal own ethical and deontological attitudes of professions and be receptive to new concepts, ideas and suggestions
4. Take an ethical and ethically correct and professional secrecy , essacondudente posture for the necessary social relation to the exercise of the profession
5. Contribute to the welfare of the working team that is integrated, as well as to the effective profitability of the work
6. Organize the time available in order to plan , implement and evaluate effective and efficient, routine techniques in a laboratory
7. Elaborate accurately reports / dossier of all practical activity developed , and research works under the stage
8. Identify and use methods, techniques and essential tools for research

Prerequisites

Before the course unit the learner is expected to be able to:
Not applicable

Course contents

During the internship, students should have contact with the different technical areas, macroscopic registration, tissue processing, tissue inclusion, microtomy, routine staining, cytopathology, frozen sections, histochemistry, Immunohistochemistry. Thanatological technique in the Legal Medicine component. Molecular Biology Techniques. Chemical and microbiological analysis of water, in the Public Health component.

Course contents (extended version)

1. Macroscopic registration - confirm receive and pack the parts as well as record parts
2. Tissue processing - understand the processing order and change the processors
3. Inclusion of tissues : including in paraffin and guide all types of tissues
4. Microtomy : handling a microtome and cut paraffin blocks with different processed tissues
5. Routine staining (Htaining perform, manually and automatic
6. Cytological technique : understanding types of samples , fasteners, processing and coloring
7. Cytopathology technique : View and diagnose gynecologic cytology and non gynecological samples
8. Frozen tissues and frozen sections - include and guide fresh fixation and staining tissues
9. Additional techniques Diagnoses : histochemistry , immunohistochemistry : manual and automatic
10. Thanatological technique - performing autopsies and dissection of cadavers
11. Public Health - Evaluate the importance of microbiological analysis of water in public health
12. Public Health - Evaluate the importance of chemical analysis of water in Public Health
13. Public Health - Interpret the analytical result of water and food against the Law
14. Molecular Biology - perform PCR techniques, DNA extraction, probes, interpret results.

Teaching and learning methods

The Learning Stage develops in public and private laboratories of APTC and Public Health distributed throughout the country in which students visualize and implement the techniques of the different areas under the supervision of a training supervisor for the local and by area (macroscopic registration, histology, cytology, immunohistochemistry, histochemistry, thanatology and public health) .

Assessment methods

- Continuous evaluation (by the adviser) - (Regular, Student Worker) (Final)
 - Laboratory Work - 80% (Continuous assessment of the internship)
 - Reports and Guides - 20% (Internship report)

Language of instruction

Portuguese, with additional English support for foreign students.
